Telco

Healthy sector conduct with limited downside

We noted healthy development in the sector, with FREN applying price increases in 3 product lines for the price sensitive segments. IOH price hikes in Jul - Aug months have largely endured in September and Hutch3 now is applying more product innovation. On the back of its expansion in ex-Java, we think ISAT's earnings should outperform the sector in 2H23. We like EXCL for its undemanding valuation; we also see more reason for a telco merger with FREN to take place.

Smartfren raised prices for 3 product lines by ~10%, namely: a) short validity 1GB/day Unlimited, b) Unlimited Non-Stop for short/long validity, and c) Quota based package denominations with no incremental quotas. This is significant for the sector given that Smartfren is present in the price-sensitive segment and was a sector laggard in regard to raising prices.

Hutch3 is betting on product innovation. Across-the-board price hikes in Jul-Aug period appear to have largely endured in September month. Following the barrage of price increases, Hutch bets now on simplification and giving users the freedom to choose quotas (between 1GB-150GB) based on their needs. IOH appears to have more trust in its ICT systems, billing and network capacity, and this definitely raises the stakes.

TSEL is following the same tempo. Telkomsel (TSEL) did not attempt to change prices in September. It will be long before **TSEL** engages again in across-the-board price hikes. This stance helps to shift focus to drive take up in FMC products.

Mixed impressions from XL's September price catalogues. The flagship 30-day XTRA Combo Plus (Regular & VIP) is subject to more price discounts than in August with a data yield of below Rp2,000 possibly due to macro & competition factors. By contrast, XTRA Combo Flex saw sharp price increases by 10-47% with additional quotas (the median implied data yield reached Rp4,600 or +10%).

Financially unconstrained IOH executing its transformation strategy. IOH is financially unconstrained and is in a uniquely favorable position whereby its network and operations transformation strategy is expected to continue generate synergies. Fiber divestments are in due process and can provide plenty of leeway to offer more dividends and compensate shareholders even more.

Smartfren is setting near-term targets before any other corporate action. According to Smartfren, merger talks with XL were held 2 years ago. They did not end then and have now resumed. FREN has set a timeframe to conclude its capex program by 1H24 at the latest for an additional 2,000 sites, and the planning may well be tied to the timing of the current merger talks with XL, we believe.

Merger preparations could be underway. The current enterprise values of EXCL IJ and FREN IJ are Rp73.6tn/Rp43.1tn with market caps of Rp31.1tn and Rp18.9tn, respectively. FREN is highly leveraged with ~5.0x ND/EBITDA vs. 2.7x for EXCL. We think the fastest way for FREN to deleverage is for principal shareholders to add more share capital. Moreover, the Sinarmas ICT subsidiaries have been operating autonomously till now. A telco merger would be the catalyst for such ICT integration to take place in Sinarmas and generate synergies from a merger.

Reiterate sector Overweight. On the back of healthy market development based on our findings for Sep-23, we reiterate our sector Overweight rating on the Telco. We prefer ISAT (Buy, TP Rp11,100) - for its financial strength and revenue outlook; short-term catalyst coming from selling fiber assets is justified. We like EXCL (Buy, TP Rp3,900) for its non-demanding valuation; We see indications and more reasons for another telco merger to take place.

			Target	iviarket					
			Price	Cap.	P/E (x)		P/BV (:	ROE (%)	
Company	Ticker	Rec	(Rp)	(RpBn)	2023F	2024F	2023F	2024F	2024F
IOH	ISAT IJ	BUY	11,100	78,611.4	23.9	21.7	2.7	2.5	11.8
XL Axiata	EXCL IJ	BUY	3,900	30,588.3	22.1	14.6	1.2	1.1	7.7
Telkom	TLKM IJ	BUY	4,600	372,473.9	14.7	13.2	2.7	2.5	19.8

Hutch 3 is betting on Happy and simplification. The quota-based pack Happy (no-frills) is now being offered as Happy Flex which lets the user buy any quota between 1GB – 150GB for 1/3/7 or 30 days with corresponding prices. While quota-based packs are common, we rarely see such breadth in denominations. This requires significant flexibility in systems, billing and network capacity which IOH appears to be in position to support. Hutch3 is definitely raising the stakes by making quota choices a much more interesting consumer experience. Following across-the-board price hikes in July and August, Hutch is now betting on simplification and giving the user the freedom to consume quotas based on how they think best. This goes against other standardized packs with predetermined quotas and quotas for Sosmed/OTT content use.

Smartfren made a bold move to raise prices on 3 product lines, namely: a) short validity 1GB/day Unlimited by ~10%, b) 10% price increases across the family of Unlimited Non-Stop offerings for short/long validity, and c) 10% price increases across its quota-based package denominations without offering incremental quotas for all 3 product lines. This is in itself significant for the sector given that Smartfren was a sector laggard in regard to raising prices and because the brand is mostly positioned in the price sensitive segment.

With an eye on the macroeconomy, TSEL is following the same tempo. Telkomsel (TSEL) did not attempt to change prices in September. Rather, TSEL's approach is different than its peers as it is focusing on filling any supply gaps to fully address the market demand. TSEL has been very dynamic in that respect adding new variations to its products introducing opportunistic series accompanied by SoSmed or OTT Content such as 7-day Special Promo packs with quotas of 10.5GB - 20.5GB incl. SosMed and 28-day Super Seru in the 100-330GB range that includes OTT content. The long-standing fighting product lines Internet Sakti and Combo Sakti remain dynamic introducing new variations for short and long validity packs (Internet Sakti's 15GB YouTube quota has now been removed). TSEL executives are closely scrutinizing macroeconomic data, which contributes to their conservative stance, we believe. Any TSEL marketing plan is not expected to implement price hikes across-the-board. Instead, we believe the focus will be to encourage users to take up FMC.

Future use cases to be supported mainly by 4G. Garnering impressions from Telkom analyst day, we understand that TSEL incl. other telcos have limited appetite to acquire 5G spectrum (except for low range 700MHz) referencing shortcomings. We expect 4G to be the main revenues and growth engine in the next 2-3 years. 4G will suffice for 4G-based FWA for consumers and industrial IOT for enterprises and SMEs. As such, we expect the regulator to be pragmatic and choose not to enforce 5G spectrum auctions (higher bands) unless they come at a significant discount. Those conditions could shape a more profitable outlook (at least margins will not deteriorate and capital returns may continue to improve).

Mixed impressions from XL's September price catalogues. The flagship 30-day XTRA Combo Plus (Regular & VIP) is subject to more price discounts than in August. 4 of 6 price discounts led to final prices below Rp100,000 for 44GB quotas with an implied data yield below Rp2,000. This is a defensive move, we believe, which is most likely to address macroeconomic factors and potential competition from IOH and Hutch. By comparison, XTRA Combo Flex was subject to sharp price increases from 10-47% with increases in quotas (on a net basis, the median implied data yield reached Rp4,600 or +10%).

Additionally, we see price increases in the complementary booster quotas for both XL and AXIS brands.

Smartfren is setting near-term targets before any other corporate action. Smartfren mentioned during our call that it added an incremental 2,500 BTS sites in 1H23, and is looking to add another 2,000 to conclude its capex program. Smartfren has a timeframe to conclude its capex program by 1H24 at the latest, and we believe this coincides with the timing of the current merger talks with XL. According to Smartfren, merger talks with XL were held 2 years ago and have now resumed. This means FREN has ~3-9 months to show improvements to negotiate a higher valuation for itself in the case a merger deal materializes. Kemkominfo acknowledged that merger talks are in process and the minister pledged his support for a deal.

Merger preparations could be underway. The current enterprise values (EV) of EXCL IJ and FREN IJ are Rp73.6tn/Rp43.1tn with market caps of Rp31.1tn and Rp18.9tn, respectively. FREN is highly leveraged with ~5.0x ND/EBITDA vs. 2.7x for EXCL. The fastest way for FREN to deleverage is for principal shareholders to add more share capital as one potential option, which FREN may consider. We recall that Hutch3 (prior to its merger with Indosat) deleveraged its balance sheet with a share capital increase of Rp47tn and converted all its debt to equity, becoming debt-free and a more attractive merger target.

Catalyst for Smartfren and Sinarmas to realize ecosystem synergies. The combined EBITDA of XL Axiata and Smartfren are in the proportion 76%/24%, respectively, in terms of 1H23/FY23F revenues and EBITDA. To achieve a merger between equals, FREN shareholders would have to compensate for the gap with an equity injection in the form of cash or an in-kind transaction offering stakes in Sinarmas ICT ecosystem companies such as MyRepublic, Oxygen in fixed broadband, and Moratelindo for backbone. We believe the latter is relatively low hanging fruit as the Sinarmas ICT subsidiaries have been operating autonomously till now. A telco merger would be the catalyst for such ICT integration in Sinarmas to pursue FMC strategies as well as more telco expansion in ex-Java regions. A potential deal with XL Axiata would necessitate such an integration process and support Sinarmas ICT to align with market trends.

IOH executing its merger strategy and moving swiftly to attain more cash. IOH is considering divestment of its fiber assets (Bloomberg article) which contains cables for FTTT and FTTH. IOH can jumpstart its fixed broadband operations supported with the supply of homepasses by a 3rd party (tender process ongoing).

IOH is in a uniquely favorable position whereby its transformation strategy in network and operations is financially unconstrained. Fiber divestments can provide plenty of leeway to offer higher dividends and compensate shareholders even more (fiber assets valued at USD1bn as per Bloomberg article). IOH will continue to extract synergies in its core network, ICT systems and business processes. IOH, in the span of 18 months postmerger, is reported to be on track to deliver merger synergies of USD400mn in 3 years. 1H23 synergies effectively stood at USD180mn (IDR128mn recurring).

XL's asset-light strategy is taking more shape: Its partner Linknet is approved for a Rp3tn loan facility. XL's cashflow generation is smaller than the Telkom group's and IOH's given the size factor (subscriber numbers, spectrum amount, leverage on distribution networks, cashflow) and thus its sector displacement factor is less. Nonetheless, in this asymmetric battle, XL has been resilient in terms of profitability and being at the forefront of telco innovations. Moreover, EXCL has built a reliable ecosystem of partners trusting the company with the supply of FTTT, FTTH and potentially backbone decoupling itself from the infra biz. Very recently, its main partner Linknet secured a loan facility from BCA of up to Rp3tn with a tenor of 3 years to build 1mn homepasses. We believe Linknet's new infra model is viable with potential payback of its investment by year 7 with around a 60+% EBITDA margin in its new wholesale / B2B infrastructure business serving 1 to 2 clients. LINK can become more attractive to new shareholders if it acquires a stake in EXCL IJ, as the subs and brand name can be divested to XL via inbreng in one potential scenario.

The XL asset-light strategy can be more robust with the potential merger of FREN and Sinarmas ICT ecosystem companies supplying the merged telco with fiber in ex-Java areas, and potentially homepasses.

Exhibit 1: Indosat Ooredoo Hutchison IOH (ISAT IJ) forward 2023-24 3yr EV/EBITDA multiple band
