- As domestically focused sectors underperformed, we cut our FY24/25 EPS growth est. to 2.4%/9.3% and JCI FY24-end target to 7,448.
- Despite still muted growth indicators, we expect seasonal tailwinds to benefit certain sectors (e.g., Retail, Consumer) in 4Q24.
- At a forward P/E of 11.9x, JCI valuation is attractive (160bps spread vs. 10-yr yield); amid macro risks, we favor quality stocks and USD hedge.

#### Domestic Sectors Dragged Down 3Q24 Earnings; Forecasts Lowered

While 65% of companies under our coverage reported in-line 3Q24 earnings, overall results were still disappointing, especially for domestically focused sectors such as Consumer, Telco, and Cement. Subsequently, BRIDS' analyst forecasts have been lowered, resulting in reduced FY24/FY25 EPS growth projections of 2.4%/9.3% (previously 7%/8%). Declining 3Q24 revenue and operating earnings growth across most domestically focused sectors (exh. 2-13) necessitate price hikes in 4Q24 to recover margins.

#### 4Q24: Seasonal Tailwinds to Offer Potential Support

Despite still muted growth indicators, we expect seasonal tailwinds to benefit certain sectors (e.g., Retail, Consumer discretionary) in 4Q24. Government social aid, regional election spending, and sustained higher CPO prices (based on historical correlations with consumer sector revenue) may boost household consumption growth, in our view.

#### Mixed Liquidity Signals: Banks' NIM Stability Amidst Tight Conditions

While the strong USD (following Trump's re-election) countered our thesis of easing domestic liquidity, Oct24 saw mom stabilization in some of the big-four banks' NIMs due to rising asset yields. Persistent tight liquidity, however, is evident in banks' high LDRs and slowing deposit growth. Our macro team observes net liquidity injections by Bank Indonesia (BI) as of mid-Nov24, exceeding net SRBI issuance (Exhibit 16-17). If continued, we believe net injections could alleviate liquidity pressures, despite BI maintaining its policy rate.

#### Valuation Starts to Look Attractive, Though Macro Remain Key Risks

At a forward P/E of 11.9x (8.4% earnings yield), JCI's current valuation appears attractive, offering a 160bps spread over the 10-year bond yield (vs. 3-year average of 71bps and a historical high of 233bps). Assuming a market P/E of 13x (-0.5SD of the five-year mean), JCI's valuation is pricing in an EPS growth rate of 3%. The key risk stems from a potential further widening of the bond yield spread, driven by potential bond outflows and IDR weakness.

#### Lowering FY24-end target

Reflecting our revised EPS growth outlook, we have lowered our year-end FY24 JCI target price to 7,448, based on a P/E multiple of 13.0x (-0.5SD from 5-year mean), with bull/ bear case targets of 7,700/7,200. Amid uncertainties on the macro front (strong USD, slow growth), we prefer exposure in:

- Defensive and quality sectors: **ICBP** (Buy, TP Rp14,000), **ISAT** (Buy, TP Rp3,800), **MAPI** (Buy, TP Rp2,000), **HEAL** (Buy, TP Rp2,000)
- Companies with earnings improvement: **GOTO** (Buy, TP Rp90)
- USD hedge: **UNTR** (Buy, TP Rp31,000)

## Attractive Valuation Emerging, Prefer Quality Stocks and USD Hedge Amid Lingering Macro Risks

### Re-assessing growth outlook: FY24-25F EPS growth trimmed to 2.4%/ 9.3%

Despite the majority (65%) of companies under our coverage reporting in-line results, 3Q24 earnings still disappointed, particularly for the domestic-focused sectors (i.e., Consumer, Telco, Cement). Our analysts have trimmed their respective earnings forecasts, resulting in lower FY24/25F EPS growth of 2.4%/9.3% (vs. 7.6%/7.9% previously).

### Earnings growth for the domestic-focused sectors were trending down

On the revenue front, we noted that growth for sectors focused on the domestic market trended down in 3Q24 (except for the Consumers, whose growth bottomed in 1Q24), based on our analysis using the trailing 12-month numbers (exh. 2-7). At the operating earnings level (exh. 8-13), all domestic sectors' growth also trended down in 3Q24 (except for Retailers and ASII). This implies that consumer companies will need to pass on more price increases in 4Q24 to recover margins.

### 4Q24 Growth Outlook: better seasonality and potential support from commodities

While the monthly growth indicators are at best still mixed in Oct24, we see seasonality factor supporting some sectors (e.g., retailers, consumers) in 2H24. We believe household consumption, which grew at a disappointing 4.91% yoy in 3Q24, may also continue to benefit from the govt's social protection budget and spending from regional election. Additionally, stronger CPO price (if sustained) may also add support to consumption, judging from the past relationship with consumers sectors' revenue (exh. 14).

### Mixed Liquidity Signals: NIM Stability Amidst Tight Conditions

While the strong USD (following Trump's re-election) countered our thesis of easing domestic liquidity, Oct24 saw mom stabilization in some of the big-four banks' NIMs due to rising asset yields. Persistent tight liquidity, however, is evident in banks' high LDRs and slowing deposit growth. Our macro team observes net liquidity injections by Bank Indonesia (BI) as of mid-Nov24, exceeding net SRBI issuance (exhibit 16-17). If continued, we believe net injections could alleviate liquidity pressures, despite BI maintaining its policy rate.

### JCI Valuation Starts to Look Attractive

We believe JCI's current valuation is attractive at 11.9x forward P/E (8.4% earnings yield), which implies a 160bps spread over 10-year bond yield (vs. 3-year average spread of 71bps, and highest spread of 233bps). Furthermore, assuming a market P/E of 13x (around -0.5SD of 5-year mean), current JCI P/E is pricing in EPS growth of c.3%. The key risk, in our view, lies in the scenario of further widening of the bond yield, which may be driven by outflows from bonds and weaker IDR.

### Lowering FY24-end target

Reflecting our revised EPS growth outlook, we have lowered our year-end FY24 JCI target price to 7,448, based on a P/E multiple of 13.0x (-0.5SD from 5-year mean), with bull/ bear case targets of 7,700/7,200. Amid uncertainties on the macro front (strong USD, slow growth), we prefer exposure in:

- Defensive and quality sectors: **ICBP** (Buy, TP Rp14,000), **ISAT** (Buy, TP Rp3,800), **MAPI** (Buy, TP Rp2,000), **HEAL** (Buy, TP Rp2,000)
- Companies with earnings improvement: **GOTO** (Buy, TP Rp90)
- USD hedge: **UNTR** (Buy, TP Rp31,000)
